AQUAFAB INDUSTRIES

Managing Your Lab's Licenses

Codes, seats, activating computers, and the license dashboard.

For Aquafab Workbench 0.1.0

Edition of 27 October 2026

Screenshots show simulated machines and modelled example data, not measurements. Aquafab Workbench is not a safety system.

1 Managing your lab’s licenses

This guide is for whoever bought or manages an Aquafab Workbench license: a lab manager, a principal investigator, or a teacher running a class.

1.1 What a license does

Anyone can install Aquafab Workbench. Without a license it is a **preview**: simulated machines can be opened, set up and run, so the software can be learned before buying. A license unlocks, on the computer it is activated on:

- trials on **connected hardware** (your own machine),
- **PIV** flow-field analysis,
- **fish tracking**,
- **trial analysis** (the Analysis screen, a machine’s Analysis tab, the single-trial view, importing readings), and
- **exporting** data (CSV and PDF reports, chart and track exports).

> **A license never stops anything that is running.** It is checked only when a trial is started on connected hardware. No pump, heater, flush or emergency stop ever consults it.

A license comes with every Aquafab system, and can be bought for use with your own equipment at **aquafabindustries.com/products/aquafab-workbench-license**. Bought licenses never expire and include updates and support.

1.2 Seats and codes

A lab license is a set of **seats**; each seat is one computer.

Seat	For	Lasts
Teacher	The people who run the lab.	Never expires.
Student	Students’ and shared computers.	A year from activation, and renews itself whenever the computer is online. A seat nobody has renewed for a year can be taken by another computer, so seats pass on as classes graduate.

Each seat has its own **code**, `AQF-XXXX-XXXX-XXXX`. A code activates one computer, once.

1.3 The license dashboard

Sign in at **aquafabindustries.com/apps/licenses** with the account the license was bought with. It lists your **Student seats** and **Teacher seats**, each with its code, who it is assigned to, the computer holding it, and when it renews.

Action	What it does
Name / Email + Save	Records who a seat belongs to.
Email code	Opens a ready-written email with the code in your own mail program.
Free seat	Releases the seat from its computer. Its code stops working and a **new code** is made, so a code once shared cannot be reused.
Free all student seats (end of term)	Frees every student seat at once, each with a new code.
Computer with no internet	Turns a request code into an activation file (below).
Lab name	The name the software shows in its license panel.
Invite another teacher	Lets a colleague manage the same license.
Buy more seats	Adds seats to this license.

1.4 Activating a computer

1. Give the person the seat's code (**Email code** does it in one step).
2. On their computer, in Aquafab Workbench: the first-run dialog, or **Settings → License**. Type the code and press **Activate**.
3. The license panel then shows the lab name and the seat.

The computer needs the internet once. After that it checks its license offline at every start.

1.4.1 A computer with no internet

1. On that computer, **Settings → License**: type the code, press **Activate offline…**, then **Copy request code**. Bring the request code to you (USB stick, or typed).
2. In the dashboard, paste it under **Computer with no internet** and press **Make activation file**. Save the text as `aquafab-activation.txt`.
3. On the offline computer, press **Load activation file…** and open it.

1.5 Common jobs

A student leaves, or a class ends. Free seat (or **Free all student seats (end of term)**), then hand out the new codes to next term's students.

A computer is replaced or its operating system reinstalled. That counts as a new computer. Free the seat, and activate the new computer with the seat's new code. Updating or reinstalling Aquafab Workbench itself keeps the license.

"That code is already in use on another computer." The seat is held by a different computer. Free it in the dashboard first.

A student computer has been offline for a long time. Thirty days before a student seat would expire, the license panel warns. After expiry there are 60 days of grace with everything working. Only after that are new trials on connected hardware refused; simulated machines and anything already running are never affected. Connecting the computer to the internet renews it.
